INSTITUTIONAL COLLABORATION / CAPABILITY OVERVIEW

Bridging classroom AI with real-world enterprise engineering

Academic training • Faculty development • Applied AI projects • Industry expert sessions

BEETS Academy | Practical Enterprise AI

We help engineering institutions complement academic foundations with practical AI system design, industry-relevant use cases and applied technical learning. Engagements are tailored to learner level, academic goals and available infrastructure.

COLLABORATION OPTIONS

01 AI & GenAI student workshops

Industry-oriented sessions for B.Tech/MCA learners: GenAI foundations, application patterns, RAG and agent concepts.

02 Faculty Development Programs

Technical upskilling for educators: architecture choices, applied GenAI, teaching demonstrations and evaluation approaches.

03 Applied GenAI & Agentic AI bootcamps

Deeper developer-oriented tracks covering AI applications, RAG, tools, workflows, agent design and reliability.

04 Capstone mentoring & expert sessions

Architecture reviews, project scoping, problem statements and practitioner-led discussions for student teams.

TECHNICAL FOCUS

Generative AI • Prompt engineering • Enterprise RAG • AI Agents & Agentic AI • AI solution architecture • LLM evaluation & safety • Enterprise use cases

HOW AN ENGAGEMENT TAKES SHAPE

Discover learner needs → Align scope and level → Agree format and commercial terms → Deliver → Collect feedback and learning outcomes

ABOUT THE FOUNDER / TRAINER

Founder-led training by an enterprise technology practitioner with 17+ years of IT experience, including enterprise integration, architecture and applied AI/GenAI. The emphasis is on why architectures are chosen, how components connect, and what production constraints matter.

DISCUSS AN ACADEMIC TRAINING REQUIREMENT

Share your target audience, technical level, learning goals and preferred schedule. We can then suggest a suitable scope for a one-time program or continuing collaboration.
